**Energy Matters is Australia's leading renewable energy company, working closely with schools throughout Australia to help them gain the most from the Federal Government's \$50,000 National Solar Schools Program (NSSP) grants.**

# Your Australian partner for Renewable Energy

## Purpose and mission

Our schools can harness the power of the sun in meeting one of the biggest challenges confronting our planet - global warming-related climate change.

This exciting new program will help primary and secondary schools around the country take practical action to reduce emissions and electricity bills while providing educational benefits for students in learning about renewable energy and environmental stewardship.

# Benefits of Grid Solar

Tapping into the power of the sun using a low-maintenance grid connect system such as Energy Matters enables schools to integrate solar power easily while maintaining the convenience and reliability of mains electricity supply.

## How NSSP Works

Energy Matters understands you're busy - we'll be there every step of the way to assist you in gaining access to NSSP grants of up to \$50,000.

Most multi-campus schools (including combined primary and secondary) are eligible for a double grant of up to \$100,000! Your school may also be able to access extra state funding. In addition, Energy Matters will provide valuable special bonuses.

Once you have registered with the NSSP and confirmed your eligibility, our renewable energy experts will assist you with designing a system to suit your school's needs, providing you with a site inspection and quotation plus all required documents for the NSSP grant application.

Unlike our competition, we start the installation process as soon as your NSSP grant application is approved! On completion of the installation, Energy Matters will supply the school with a full installation report ready for the NSSP office.

## Service and support

Energy Matters provides a range of solar power packages especially designed with schools in mind.

When you select Energy Matters as your provider, you'll have a dedicated account manager who will answer any questions you have, keep you up to date on progress and ensure a hassle-free installation.

Our systems are comprised of the best quality components and installed by our accredited experts to ensure your system meets Australian Standards.

Beyond the installation, we'll still be there to provide ongoing support and answer any questions you may have.

## Special bonuses

**Free educational material and equipment for your school's teachers and students about solar power systems, plus regular newsletters and fact sheets on sustainable living issues that can be used in the classroom.**

**Energy Matters can also assist your school with solar hot water and wind power solutions, plus we'll provide generous discounts to staff and parents for home solar power systems!**

**Beat the rush!**
